

Product Safety Recall

Blitzem! Wasp Killer & Nest Destroyer Aerosol ("Blitzem")

Products: Units of Blitzem with batch number **448A DOM261114** are affected by the recall. The batch number appears under the lid on the top dome of the can. **Only** aerosol cans in this batch are included in the recall.

Defect/Hazard: In rare cases, rust and corrosion may affect the bottom of the can, potentially causing the can to suddenly and violently burst, propelling the can upwards if it is stored standing upright. This may cause injury.

What to do: Check the batch number by holding the can at arm's length and removing the cap. If your product has the affected batch number:

1. Take the can outdoors to a well ventilated area. We recommend use of protective clothing, including gloves, safety/sun glasses, and long sleeves/coveralls.
2. At arms length, gently turn the can upside down, ensuring that the bottom of the can is always pointing away from any person.
3. With one hand holding the can upside down and with the nozzle pointing away from any person, use your other hand to discharge the gas for 30 seconds or until you can no longer hear a hissing sound.
4. Take a photo of the can ensuring that the batch number is visible.
5. Replace the cap and carefully dispose of the can by wrapping it in newspaper, placing it in a plastic bag and then into the household rubbish.

Any consumers who have purchased an affected product can obtain a refund by visiting www.yates.com.au/about/contact or calling 1300 369 074. To make your application valid ensure you complete all of your details and attach a photo of the product with the batch number visible.
